

PEI-Z181J-SV3 one axis tilt sensor for boom angle measurement

General description:

- one axis -20 to 80°
- analog output 0..5V
- 2 alarm signals: Angle ≤ 15° and ≥71°.
- Zero setting with Switch
- IP67
- Intended for boom angle measurement or torque limiter, in cranes, leveling arms, medical equipment, oil drilling equipment

Specifications

		Test condition	Min value	Typical value	Max value	Unit
Performance parameter	Total range	One axis	-25		+81	°
	Linear range		-20		+80	°
	Resolution			0.1		°
	Non-linearity ^①	VCC=24V		±0.4		%/FS
	Sensitivity ^②		47.0	47.2	47.4	mV/°
	Repeatability			0.2	0.3	°
Electrical parameter	Supply voltage ^③		8		30	V (DC)
	Quiescent current ^④	VCC=24V		16	20	mA
	Zero output voltage		1.174	1.179	1.184	mV
	Operating temperature		-40		+85	°C
Others	Zero temperature drift	-40---+85°C		0.009		°/°C
	Size			72*72*45		mm
	Cable length		0.95	1	1.05	M

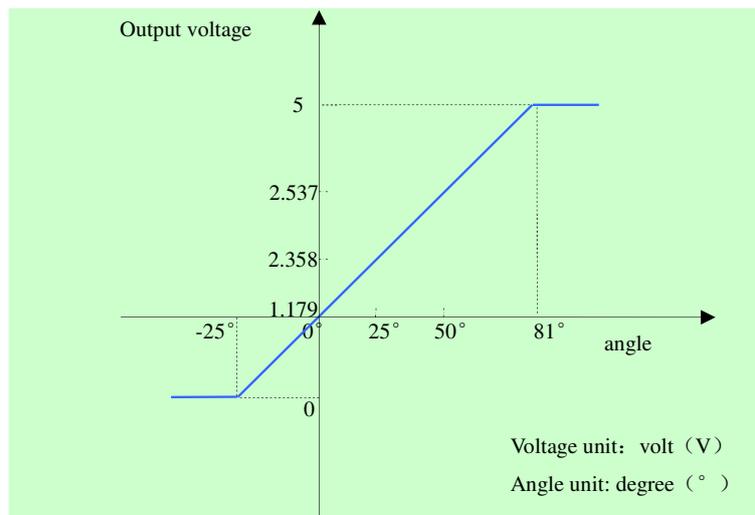

①: Non-linearity means the deviation degree of output voltage line and best fitting curve in the measuring range between -20° and 80°.

②: Sensitivity defines as follow: $V_{sens} = \{V_{out}(@80^\circ) - V_{out}(@-20^\circ)\} / \{100^\circ\} [mV/^\circ]$

③: 24VDC is recommended .

④: Quiescent current is 16mA @ 24VDC when product is with alarm switch open

Input-Output characteristic:

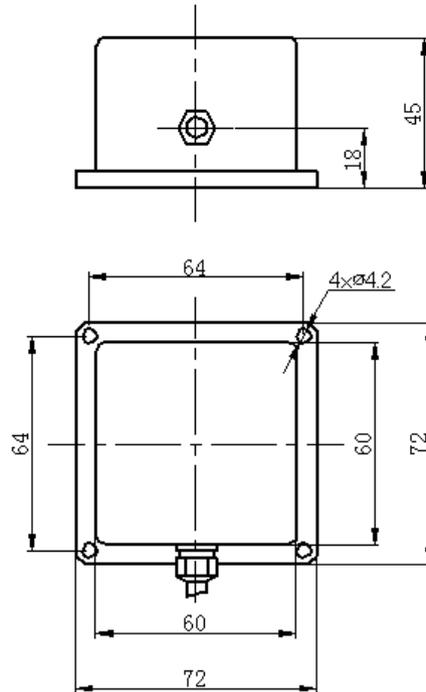

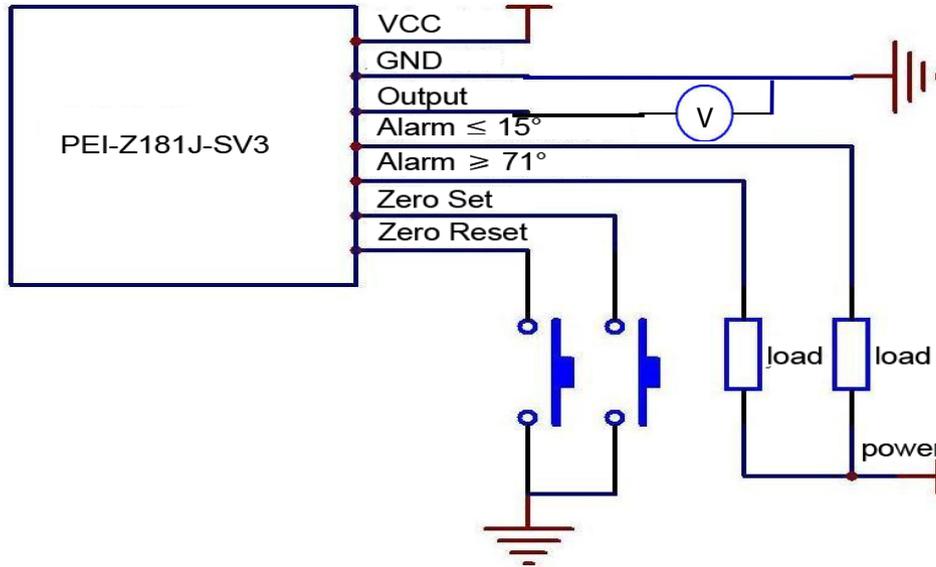

User instruction:

1. To be installed vertically, with cable output down. Then output angle value is 0°, corresponding voltage value is 1.179V (± 0.005) (output voltage increases while turning CW, and output decreases while turning in CCW direction.)
2. angle calculation:
 - a. total angle: $-25^{\circ} \sim 81^{\circ}$, corresponding voltage 0V \sim 5V
 - b. $\text{angle} = (\text{output voltage} - \text{zero output voltage}) / \text{sensitivity}$
3. set and reset relative zero.
 - a. set relative zero : shorting zero line to GND for about 1 second will set the current angle as zero (memorised after power off)
 - b. reset relative zero: shorting the reset line to GND for about 1 second will delete the relative zero and renew the absolute output.
4. alarm signals
 - a. this product has two alarm signals, to be connected to VCC via external loads.(max. load current 500mA)
 - b. The switch is Normally Open
 - c. yellow line output alarm signal if angle value $\leq 15^{\circ}$
 - d. green line output alarm signal if angle value $\geq 71^{\circ}$

Wire connection definition and installation size:

Red	Black	Green	Yellow	Blue	Brown	white
VCC (supply)	GND (ground)	Voltage output	≤15°alarm signal	≥71°alarm signal	Set zero	reset

Order information: PEI-Z181J-SV3
 Standard: Alarm switch NO (normally open)
 Option: Alarm switch NC (normally closed)
